1. About the Organization

Amazon Web Services (AWS) is the world's most comprehensive and broadly adopted cloud platform, offering over 200 fully featured services from data centers globally.

2. Key Roles & Responsibilities

- Diagnose, troubleshoot, and resolve complex architecture and security queries on AWS.
- Assist enterprise clients in deploying Infrastructure-as-Code using Terraform and CloudFormation.
- Formulate security best practices around IAM, VPC peering, KMS encryption, and GuardDuty.
- Author internal runbooks, automation scripts, and technical troubleshooting guides.

3. Technical Requirements & Qualifications

- Strong understanding of Linux/Unix core administration, Bash scripting, and Networking (DNS, TCP/IP).
- Working knowledge of Cloud computing primitives (Compute, Storage, Identity, Networking).
- Knowledge of containerization (Docker, Kubernetes) and CI/CD pipelines.
- Excellent verbal and written technical communication skills.

4. Selection & Interview Process

Step 1: Round 1: Online Technical Aptitude & Networking Assessment

Step 2: Round 2: Technical Assessment (Linux, Networking, Scripting & Troubleshooting)

Step 3: Round 3: Cloud & Security Systems Evaluation

Step 4: Round 4: AWS Culture & Customer Obsession Behavioral Round
