1. About the Organization

Cisco is the worldwide technology leader that securely connects everything to make anything possible. We transform how people connect, communicate, and collaborate.

2. Key Roles & Responsibilities

- Design, configure, and automate Next-Gen Firewalls (NGFW), VPNs, and Zero-Trust networks.
- Write automation scripts using Python to manage software-defined network (SD-WAN) fabrics.
- Analyze protocol captures (Wireshark, tcpdump) to triage network security anomalies.
- Implement enterprise identity access policies using Cisco ISE and 802.1X protocols.

3. Technical Requirements & Qualifications

- Comprehensive knowledge of OSI model, TCP/IP, BGP, OSPF, VLANs, and IPsec.
- Scripting proficiency in Python or Go for infrastructure network automation.
- Familiarity with cryptography standards (TLS 1.3, PKI, AES, RSA, Diffie-Hellman).
- Certifications like CCNA / CyberOps are advantageous but not mandatory.

4. Selection & Interview Process

- Step 1:** Round 1: Online Technical Assessment (Networking, Protocols & Coding)
- Step 2:** Round 2: Technical Interview I (Network Engineering & Cryptography Deep-dive)
- Step 3:** Round 3: Technical Interview II (Network Automation & Security Scenarios)
- Step 4:** Round 4: Managerial & HR Fitment Round
