

# Qualcomm India

## Position: Firmware & Embedded Security Engineer

|                     |                                              |                   |                                                                         |
|---------------------|----------------------------------------------|-------------------|-------------------------------------------------------------------------|
| Compensation (CTC): | ■ 14.5 LPA                                   | Job ID:           | QCOM-EMB-SEC-2027                                                       |
| Job Location:       | Chennai, Tamil Nadu, India                   | Drive Status:     | DRIVE_COMPLETED (Approved)                                              |
| Eligibility:        | ECE, Cyber Security, CSE (Min 75% aggregate) | Official Careers: | <a href="https://qualcomm.com/careers">https://qualcomm.com/careers</a> |
| Contact Email:      | campus-india@qualcomm.com                    | Contact Phone:    | +91 44 6612 0000                                                        |

### 1. About the Organization

Qualcomm is enabling a world where everyone and everything can be intelligently connected. We invent breakthrough technologies that transform how the world connects and computes.

### 2. Key Roles & Responsibilities

- Develop secure boot, cryptographic device drivers, and ARM TrustZone firmware modules.
- Audit low-level hardware security modules (HSM) and microcode implementations.
- Perform vulnerability assessments against embedded firmware and system-on-chips (SoC).
- Collaborate with silicon design engineers to harden hardware against side-channel attacks.

### 3. Technical Requirements & Qualifications

- Exceptional proficiency in Embedded C, C++, and ARM Assembly.
- Understanding of Microprocessor Architecture, Registers, DMA, Interrupt Handlers, and RTOS.
- Solid grasp of Hardware Security (Secure Boot, TPM, TrustZone, AES/RSA Accelerators).
- Experience with logic analyzers, JTAG debuggers, and oscilloscopes.

### 4. Selection & Interview Process

**Step 1:** Round 1: Online Assessment (C Programming, Digital Electronics, OS)

**Step 2:** Round 2: Technical Interview I (Embedded C, Memory Management & Bit Manipulation)

**Step 3:** Round 3: Technical Interview II (Microcontroller Architecture & Hardware Security)

**Step 4:** Round 4: Director / HR Evaluation Round
