1. About the Organization

Salesforce is the world's #1 customer relationship management (CRM) platform, empowering companies to connect with their customers in a whole new way through AI, data, and CRM.

2. Key Roles & Responsibilities

- Develop multi-tenant cloud business logic using Apex, Java, and Lightning Web Components (LWC).
- Build asynchronous integrations and REST/SOAP APIs for enterprise ecosystems.
- Write comprehensive automated test suites enforcing high code coverage and reliability.
- Optimize SOQL query plans and indexing strategies on high-volume database structures.

3. Technical Requirements & Qualifications

- Solid foundation in Core Java / Object-Oriented Programming and Relational Databases.
- Familiarity with Modern Web Standards (JavaScript ES6+, HTML5, CSS3).
- Understanding of microservice architecture, API design, and distributed systems.
- Strong interpersonal skills and an agile continuous delivery mindset.

4. Selection & Interview Process

Step 1: Round 1: Futureforce Online Assessment (Coding & Problem Solving)

Step 2: Round 2: Technical Round I (Data Structures, Algorithms & OOPs Concepts)

Step 3: Round 3: Technical Round II (Database Design, RESTful APIs & Web Technologies)

Step 4: Round 4: Hiring Manager & Values Alignment Round
