1. About the Organization

Palo Alto Networks is the global cybersecurity leader, continually delivering innovation to enable secure digital transformation across clouds, networks, and mobile devices.

2. Key Roles & Responsibilities

- Monitor, detect, and respond to global security events in real-time 24/7 SOC environment.
- Configure and automate incident playbooks using Cortex XSOAR and Cortex XDR.
- Analyze Next-Generation Firewall logs, DNS sinkhole data, and SSL decryption events.
- Participate in root-cause investigations and produce post-incident executive summaries.

3. Technical Requirements & Qualifications

- Deep comprehension of Network Security, Packet Inspection, and Cyber Attack Lifecycles.
- Hands-on experience with SIEM platforms (Splunk, QRadar) and EDR tools.
- Basic scripting skills in Python or Bash for log parsing and automation.
- Familiarity with industry compliance frameworks (ISO 27001, NIST, SOC2).

4. Selection & Interview Process

- Step 1:** Round 1: Online Cyber Security & Networking Assessment
- Step 2:** Round 2: Technical Round I (Packet Analysis, Firewall Protocols & SOC Scenarios)
- Step 3:** Round 3: Technical Round II (Threat Hunting, Incident Simulation & SOAR Playbooks)
- Step 4:** Round 4: HR & Behavioral Round
