1. About the Organization

Cognizant engineers modern businesses, modernizing technology, reimagining processes, and transforming experiences so clients can stay ahead in a fast-changing world.

2. Key Roles & Responsibilities

- Develop modern UI components with React / Angular and backend services in Java / .NET.
- Participate in daily Scrum meetings, sprint planning, and code commit workflows.
- Perform automated unit testing and support deployment on cloud platforms.
- Maintain and refactor existing legacy enterprise applications.

3. Technical Requirements & Qualifications

- Good understanding of Core Java, C#, or Python and SQL databases.
- Understanding of Web technologies (HTML, CSS, JavaScript) and Git workflows.
- Strong logical reasoning, algorithmic thinking, and verbal communication.
- Willingness to learn and adapt to diverse technology stacks.

4. Selection & Interview Process

- Step 1:** Round 1: Cognizant GenC Elevate Assessment (Aptitude & Technical Coding)
- Step 2:** Round 2: Technical Interview (OOPs, SQL, Web Basics, Academic Projects)
- Step 3:** Round 3: HR & Location Preference Discussion
